To Whom It May Concern:

Jim Crawford Construction has performed several grading jobs for Granville Homes, Inc. The most notable is the Copper River Project in Fresno, California. This development is approximately 380 acres around the back 9 holes of the Copper River Golf Course. Over 1.2 million yards of dirt were moved to create 800 residential lots, multi-unit super pads, commercial pads and the excavation of 350,000 yards to create a FMFCD ponding basin. Their experienced staff completed this very difficult job ahead of schedule.

My experience with Crawford Construction has been that they are very professional and their work is of the highest quality. They are quick to respond and a pleasure to work with. I would recommend them without any reservation to anyone who might be considering contracting with them. Please do not hesitate to contact me if you desire any additional information.
